

YOUR DREAM OUR PASSION

TASKS

WEB DEVELOPMENT INTERNSHIP TASK

This Internship program focuses on providing you with hands-on experience in Web Development. You will learn the latest technologies and framework to build modern and responsive Websites.

TASK 1

Temperature Converter Website

Developing a website that converts temperature recorded in one unit to another can be an excellent place for web developers to move forward in their web development journey. The measuring units of the temperature recorded in a particular unit can be converted with a temperature converter, necessitating you to build a dropdown menu with temperature scales..

TASK 2

Background Generator

A background generator is a great way to practice CSS skills and familiarize yourself with basic JavaScript concepts. In this project, you will select a basic or a gradient colour and generate it via code. You will then create a webpage that generates random background colours and allows users to customize and copy the generated colour code.

TASK 3

Responsive Blog Website

A responsive blog website is a website that is designed to adapt and display content optimally on all devices, including desktop computers, tablets, and mobile devices. With a responsive design, the website layout, images, and text automatically adjust to fit the screen size of the device used to view the website.

TASK 4

Landing Page

A landing page is one of the best web development projects for beginners. A foundational understanding of HTML and CSS is required. You will learn how to add columns, divide sections, arrange items, add headers, footers. Create an impressive page using your creativity. It is important to pay attention to the alignment, the padding, the color palette, and boxes. Make sure CSS doesn't overlap elements.
